

NetGUI

The diagram illustrates a software architecture stack. At the base is the 'Hardware' layer. Above it is the 'Kernel de Linux' layer. On top of the kernel, there are three main components: 'Proceso 1' on the left, 'UML' in the center, and 'Proceso n' on the right. The 'UML' component is further divided into two sub-layers: 'Netkit' on top and 'NetGUI' on the bottom. All components are represented as colored rectangles with black outlines and text.
